

Inspire a passion for learning

EducationCity is a web-based program that provides fun and engaging, research-based student activities and teaching resources in language arts, math, science, and ESL.

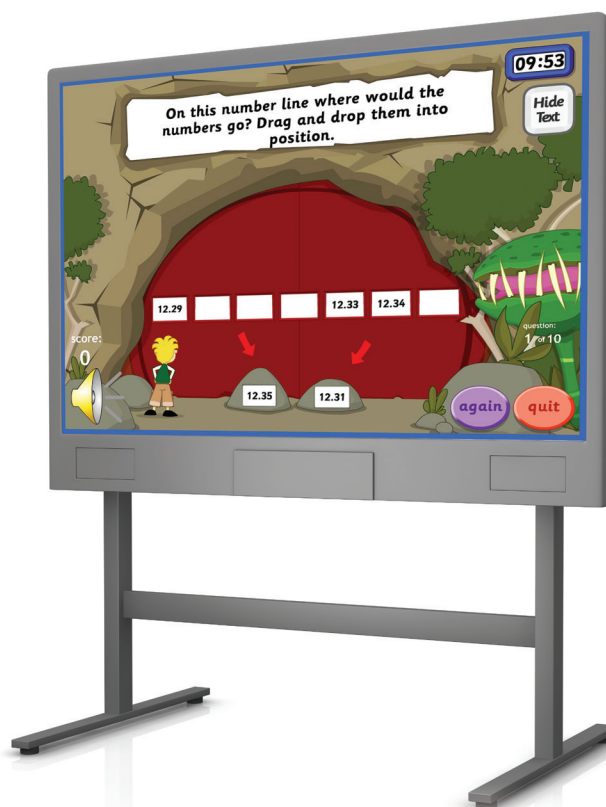

What it is

- Engaging practice and instruction correlated to state and Common Core standards
- Interactive lessons and activities for topic introduction and skills reinforcement
- Real-time progress monitoring and intervention

Why it works

EducationCity's teaching and learning resource:

- Supports instruction for whole-class, small group, or one-on-one lessons
- Enhances RTI, remediation, and special education programs with differentiated instruction
- Provides teachers with built-in resources including lesson planning tools and whiteboard activities
- Motivates students with interactive activities and live academic challenges
- Tracks student success with real-time reporting and progress monitoring

Individualize instruction

EducationCity's interactive lesson preparation tools help teachers pinpoint content that matches lesson objectives. Teachers can quickly and easily identify specific learning goals, select specific topics, and hand-pick activities for future lessons. Teachers have the ability to create unique lessons and tailor content and instruction to meet individual student needs. Alternatively, EducationCity's Revision Pathway automatically identifies student achievement gaps, and prescribes lessons and activities based on performance data.

Promote learning

EducationCity's web-based activities allow for whole-class lessons, differentiated learning in small groups, or one-on-one instruction. Teachers can assign work to individual students, or an entire class, for reinforcement and enrichment. EducationCity provides a wealth of automatically-generated data, with every completed activity automatically saved and scored so teachers can quickly and easily monitor student progress and address individual student needs.

Boost engagement

Students are motivated to learn with interactive content, built-in rewards, and a personalized learning experience. Additionally, they can practice math and ELA skills in real-time against their peers across the country through EducationCity's PlayLive feature. Not only are students practicing and reinforcing academic content, but they are doing it in an engaging and motivating environment that supports achievement.

Support english language learners

EducationCity's Learn English program is designed to meet the needs of beginner to pre-intermediate English language learners. Learn English encourages English language development through clusters of thematically linked activities.

EducationCity is a dynamic resource that can adapt to student strengths and weaknesses on the fly while they are answering questions, allowing for a very powerful tool in our arsenal of education support systems!
